

Title: Submission Template to *Lehigh Rising Scholars Journal*

Authors: Authors should be listed by given name(s) followed by family name(s). Carefully check that all names are accurately spelled and separated by commas in a single paragraph. Use superscript numbers to link affiliation.

Affiliations:

- ¹ Using superscript numbers, list the complete name of each affiliated institution; separate the city and country with a semicolon.
 - ² Each affiliation should have an individual number and paragraph.
 - ³ Department of Something, Example University; City, Country.
- * Corresponding Author. Email: include the email address(es) of the corresponding author(s). This person will handle correspondence for your article at all stages. Place an asterisk (*) symbol in the author list following the affiliations to denote the corresponding author.

Abstract: The abstract should be a single paragraph with no more than 250 words. This paragraph should explain to the reader the purpose of your research, how the subject was approached, principal results, and conclusions. References should be avoided.

Keywords: As LRSJ is a multidisciplinary research journal, you should provide 1 to 6 keywords to identify the field(s) of your work.

Main Text

Use 10.5-12 pt font and 1.5 spacing for the main text and indent the first sentence of each paragraph. Include the page number on the bottom right of each page. Any abbreviation should be introduced at the first mention in the text. Start your manuscript with a brief introduction that provides background information and context for the significance of the presented research.

Organize the main text using subheadings, with descriptive terms, not full sentences. You may use up to 3 nested levels, using a line break for each and distinguishing them as:

Bold for level one

Bold and italic for level two

Italic for level three

The specific sections should be appropriate for your research field, but it is recommended to organize original research manuscripts into the following sections:

Materials and Methods

The information provided in this section should contain sufficient detail to allow replication of the study in conjunction with cited references. Ethics approval information should be included in this section when necessary, such as when animal or human research is performed. Statistical methods should be described, and the original data should be available upon request to verify the results. Statistical significance symbols must be consistent throughout the manuscript, indicating the specific statistical test(s) performed in the appropriate figure caption or results text.

Results and Discussion

Use subheadings to clearly state each part of the research performed. You should cover the key findings of the study, discuss the novelty and the limitations of the work, and compare them to the current state of the field. All figures and tables should be numbered in the order they appear in the manuscript and should be cited in the main text.

Figures

During the submission process, figures can be introduced in the manuscript with a *top and bottom* text wrapping, but will require individual full-resolution versions before the editing process. For more details about figure submission, you can consult the Guidelines document. Caption should be positioned immediately under the figure labeled as “**Fig. #.**”, including a short figure title in **bold** font. When a figure includes distinct panels, they should be labeled with uppercase bold letters in parentheses (**A**, **B**, **I**, etc.) and should be described in order within the caption. The figure title should describe the figure as a whole, not individual panels.

Fig. 1. A descriptive title. (A) A first panel can be explained. (B) A second can then be explained.

Tables

The content of the tables should be cited in the main text, but it should not duplicate the table’s information. Tables should contain a caption before the table, including a short title, and be labeled as “**Table #.**”. Every column/row should have a heading. Units of measure should be included in the heading in between brackets “[x]” and not change within the column. Tables can be arranged within the main text during submission, but they should be inserted in an editable format.

Table 1. Description of the table. Do not create tables with tab characters.

Conclusions

Cover key findings of the study in one paragraph. Mention the limitations of the work and the future directions. Remember, this is your take-home message.

References

References are numbered in the order they are cited in the main text. In the manuscript, citation numbers should be italicized, with a grey font (Hex #646464) placed in brackets. In the reference section, they should be listed in order. Each reference should be on a separate line ending in a period.

[1] First name initial. Surname, Article title. *Journal name*. Volume no. (issue) page(s) (Year), DOI.

[2] A. Person, B. Person, A very interesting title. *Very Real Journal*. 1(2) 345-348 (2025), <https://doi.org/10.0000/abc>.

Acknowledgements

Non-author contributions can be mentioned in this section, including any disclosure of editing services and AI-assisted technologies. **Funding information**, including grant numbers, agency, and the recipient's initials. **Competing interests** of any of the authors must be listed (for the statement of no competing interests, refer to the Author Guidelines). **Data and materials availability** of the manuscript and supplementary materials should be stated.
